

WALTERBORO EYECARE CENTER

EARLY DETECTION SCREENING TESTS

1. RETINAL PHOTOGRAPHY: A picture of the back of the eye which can assist in the early detection of retinal problems, optic nerve disease, glaucoma, macular degeneration, hypertensive disease etc. A complimentary copy of your photograph will be provided if requested.

Routine photography: **Cost: \$ 32** **Yes:** _____

Do you want the test: **No:** _____

2. OCT (Type of Ocular CT Scan) – allows state of the art visualization of the eye structures, which can provide early detection of retinal disease, such as age related macular degeneration, glaucoma and diabetic retinopathy.

Routine OCT scan : **Cost: \$ 20** **Yes:** _____

Do you want this test: **No:** _____

3. MPOD (Macular Pigment Optical Density) - allows us to determine the probability of developing age-related macular degeneration. (**AMD**) Increased levels of Lutein and Zeaxanthin has been proven to enhance visual performance. (better night driving, decreased glare and light sensitivity etc.)

AMD is the leading cause of vision loss in adults affecting more than 15 million Americans:

Routine MPOD test: **Cost: \$ 15** **Yes:** _____

Do you want this test: **No:** _____

DO ALL THREE TESTS FOR ONLY \$52.00 **Yes:** _____

Due to the prevalence of Diabetes and AMD all tests are highly recommended.
